Who we are

VDMA Power-to-X for Applications is a cross-industry platform for exchange, communication, and cooperation in the P2X community. It involves all important stakeholders, from the development of manufacturing processes through the production of synthetic fuels and raw materials using power-to-X technologies to the end customer.

With our activities, we promote a holistic and technology-open approach to the transformation of energy systems, and we raise public awareness of environmentally friendly energy use and mobility.

In a nutshell: VDMA P2X4A is your strong network covering the entire value chain from power (e.g. wind, solar or hydro energy) to X (process engineering) for applications (e.g. for on- or off-road propulsion, heating, process industries).

What we do

Networking

A strong network of all relevant stakeholders (mechanical engineering, automotive industry, petroleum industry, etc.) along the entire value chain.

Lobbying and Public Relations

Representing the voice of the industry concerned and position P2X in politics & media, in Berlin and Brussels.

International markets

Cooperation with the administration regarding energy partnerships with foreign countries (MENA, South America, etc.).

Research

Cooperation with important research associations, support the necessary research transfer and develop roadmaps and application concepts.

Standardisation

Setting standards in the relevant committees and quickly establish instruments to accelerate standardisation processes.

Focus

On members.
